

Amendments to the Specification

Please insert before paragraph [0019] the following new headings and new paragraph:

BRIEF DESCRIPTION OF THE DRAWINGS

Fig. 1 is a front view of a contact lens of the invention; and

Fig. 2 is a section taken in the plane 2--2 of FIG. 1.

DETAILED DESCRIPTION

Please amend Paragraph [0026] as follows:

[0020] The change in shape of the contact lens can be localised to the front surface 3 and/or back surface 5 and/or an embedded zone 7 within the contact lens, as best illustrated in FIG. 2.

Please amend Paragraph [0030] as follows:

[0030] The stimulus for changing the shape of the contact lens surfaces or the shape of an embedded part of the lens may be provided by an electric field produced by means imbedded in the contact lens itself. Any suitable means for providing the electric field may be used. In one arrangement, illustrated in FIGS. 1-2, a chip 11 may be embedded in the contact lens 1. The chip 11 may be a nano or micro chip and will generally be configured to that it is not visible to the user. The chip may be triggered to emit the electric field by any suitable means.
